

Cloud Security Policy

1. Introduction

This document defines security requirements for company cloud services.

The objective is to protect cloud applications, data, and infrastructure.

2. Cloud Account Management

Cloud accounts are created only for authorized users.

Shared accounts are prohibited.

Access follows the principle of least privilege.

3. Identity and Access Management

Security requirements:

- Strong passwords.
- Multi-factor authentication.
- Regular access reviews.

Inactive accounts must be disabled.

4. Cloud Data Protection

Sensitive data stored in the cloud must be protected.

Required controls:

- Encryption at rest.
- Encryption during transmission.
- Regular backups.
- Access control.

5. Cloud Storage Policy

Public access to sensitive files is forbidden.

Users must verify permissions before sharing documents.

6. Cloud Monitoring

The security team monitors:

- Login activities.
- Access changes.
- Security alerts.
- Resource modifications.

7. Backup and Recovery

Critical cloud data must be backed up regularly.

Recovery procedures must be tested.

8. Security Incident Management

Cloud incidents require:

1. Detection.
2. Investigation.
3. Containment.

4. Recovery.

5. Documentation.

Document name:

Cloud Security Policy
