

Network Security Policy

1. Introduction

This document defines the security rules and procedures applied to the company network infrastructure.

The objective is to ensure the availability, confidentiality, and integrity of network resources.

2. Network Access Control

Network access is restricted to authorized users and devices.

Users must authenticate before accessing internal resources.

Access permissions are assigned according to user roles.

3. Firewall Policy

Firewalls protect internal networks from external threats.

Firewall rules must:

- Allow only required traffic.
- Block unauthorized connections.
- Be reviewed regularly.

4. Wireless Network Security

Company wireless networks must use strong encryption.

Requirements:

- WPA2 or WPA3 authentication.
- Secure passwords.
- Guest network isolation.

5. Remote Access Policy

Remote users must use secure VPN connections.

Multi-factor authentication is required for remote access.

6. Network Monitoring

Network activities are monitored using logs and security tools.

The security team analyzes:

- Firewall logs.
- Authentication logs.
- Network traffic.

7. Incident Response

For a network incident:

1. Identify the problem.
2. Contain the threat.
3. Remove malicious activity.
4. Restore services.
5. Document the incident.
